Modules designed to work however you need them to.

Greenhouse Gas Emissions (GHG)

Easily capture sustainability data, influence how you manage your business and clearly show how actions impact the bottom line. Our modular platform allows companies of any size to have a platform tailored to their needs. Extending Sustainability Sure to cover more buildings, countries, activities and adding additional modules such as GHG has never been easier.

GHG Module

Greenhouse Gas Emissions auditing can be a significant distraction for any organisation if systems and processes are not in place.

Sustainability Sure provides a clean process centered around the safe storage of emissions and sustainability data, verified calculations and underlying methods. It is easy to use, and easy to audit. Documents in the repository are quick to find, as are meters, and meter data, and any unique tags that businesses have assigned.

The dedicated audit screen within the software for the audit, pass, fail process allows for simple and clear tracking. Best of all, as the system has audit specific user roles, the auditor can carry out much of the inspection from their office. Thus reducing their own carbon footprint, and the associated costs.

Provides exportable reports for:

- Carbon Disclosure Project (CDP)
- UK Climate Change Act Mandatory Carbon Reporting
- Carbon Reduction Commitment (CRC)
- CCA/CCL and EU-ETS
- Greenhouse Gas (GHG) Protocol
- Department for Environment, Food and Rural Affairs (DEFRA)
- ISO 14001
- ISO 14064-1
- International Organization for Standardization (ISO)
- National Greenhouse and Energy Reporting (NGERS)
- Regional Greenhouse Gas Initiative (RGGI)
- Several Management Reports

"We see it as essential to have all of our energy data in one place and Sustainability Sure offers this with the added benefit of being web-based which means it is backed up and secure." - **John Sinclair, Energy Manager**, London Borough of Sutton

Features

Collect Any Data

- Thousands of fuels and activities
- Up to date with leading trends
- Gather data in whatever shape you have it

Convert & Refine

- Intelligent data adapters
- Normalises data formats
- Any source in any format

Derive Valuable Outputs

- Reports generated in seconds
- Flexible reports and dashboards
- Powerful insights from obscure data

Benefits

Risk Mitigation

- Totally independent of any key person
- Guaranteed quality data extrapolation
- More accurate and quality reporting
- Removes risk of human error in data entry

Time Saving

- Singular system for worldwide operations; reduces time and overhead
- Up to 80% reduction in data processing
- Up to 90% reduction in regular stakeholder reporting
- Updating in real-time eliminates habitual re-works

Efficiency Benefits

- Identifies consumption hotspots
- In-built change and version control
- Audit readiness
- Global single system of record
- Automatic calculations
- Automatically change logs and audit trail
- Secure document repository
- Full support and set up of system
- Interactive charting
- All emission factors are covered

Uniquely, Sustainability Sure combines energy meter analytics, CRC compliance & reporting, GHG reporting and CSR in a single platform. It is the most complete and verified solution available on the market.

If you would like to find out more about adding the GHG module contact us on **+44 (0) 1183 913 698** or Email: **info@sustainabilitysure.com**
